## SOLUTIONS

### **SIGNAGE SURVEYS AND AUDITS**

The purpose of a signage survey or audit is to determine where and what signs are needed for identification and directional guidance as well as legal and regulatory requirements. Our surveys include site plans, sign data, photographs, legal requirement research, and sign visibility evaluation.

### **SIGNAGE PROJECT MANAGEMENT**

Signage Solutions offers comprehensive PROJECT MANAGEMENT of any signage project from strategic planning, conceptual design, budgeting, the provision of samples and mock-ups, development and implementation, technical drawings and layouts, to manufacture and supply, installation and final sign-off.

### **SIGNAGE DESIGN**

The creative team can take your logo or conceptual design and develop custom sign designs that will reflect or establish your image. We provide presentation artwork, custom face layouts and camera ready or computer artwork to ensure the accuracy of the graphics.

A good design is the key to performance and cost efficiency of any product, and signs are no exception. Of equal importance is communicating the design information to the sign manufacturer and installers. We design and specify all sign components including face decoration, lighting, structure, metal fabrication, and painting.

### **SIGNAGE MANUFACTURE AND INSTALLATION**

We manage the process of manufacture and installation from beginning to end, ensuring the best company is used at the best price and that the timing schedules are adhered to.

### **SIGNAGE PROJECT MAINTENANCE**

The value of a positive image projected to the customer is an essential ingredient that promotes the success of any business. It is truly a great loss to complete a successful sign programme implementation, only to see it not sustained with on-going sign programme management, (for example, maintaining the existing signs and selecting appropriate new signs for additional properties.)
